

THE ADVISORS' INNER CIRCLE FUND III (THE "TRUST")

Rayliant Wilshire NxtGen US Large Cap Equity ETF (the "Fund")

**Supplement Dated March 16, 2026 to the Fund's
Summary Prospectus, Prospectus and Statement of Additional Information (the "SAI"),
each dated January 28, 2026**

This supplement provides new and additional information beyond that contained in the Summary Prospectus, Prospectus and SAI, and should be read in conjunction with the Summary Prospectus, Prospectus and SAI.

Wilshire Indexes, the Index Provider for the FT Wilshire US Large NxtGen Index (the "Index"), has informed the Fund that the Index has been discontinued. As a result, the Fund is no longer able to track the Index. Rayliant Investment Research, doing business as Rayliant Asset Management, the Fund's investment adviser, is evaluating changes to the Fund's investment mandate in light of the Index's discontinuation. The Index was last rebalanced as of February 2, 2026 and would next be rebalanced on April 20, 2026. During this transition period, the Fund will continue to invest in the components of the Index, in approximately their weightings, as of the last rebalance.

Investors will receive an additional supplement to the Summary Prospectus, Prospectus and SAI reflecting any resulting changes to the Fund's investment mandate, including its name, investment objective, 80% investment policy, benchmarks, and principal investment strategies, as applicable.

Please retain this supplement for future reference.

Before you invest, you may want to review the Fund's complete prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <https://funds.rayliant.com/rwlc>. You can also get this information at no cost by calling 866-898-1688, by sending an e-mail request to rayliantfunds@seic.com, or by asking any financial intermediary that offers shares of the Fund. The Fund's prospectus and statement of additional information, both dated January 28, 2026, as they may be amended from time to time, are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website, phone number or e-mail address noted above.

Rayliant Wilshire NxtGen US Large Cap Equity ETF

Investment Objective

The Rayliant Wilshire NxtGen US Large Cap Equity ETF (the “US Large Cap Equity ETF” or the “Fund”) seeks to track the total return performance, before fees and expenses, of the FT Wilshire US Large NxtGen Index (the “Index”).

Fund Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees ¹	0.32%
Other Expenses ²	<u>0.00%</u>
Total Annual Fund Operating Expenses	0.32%

¹ The Fund’s management fee is a “unitary” fee designed to pay the Fund’s expenses and to compensate Rayliant Investment Research, doing business as Rayliant Asset Management, the Fund’s investment adviser (the “Adviser”), for the services the Adviser provides to the Fund. Out of the unitary management fee, the Adviser will pay all of the Fund’s expenses, except for the following: advisory fees, interest, taxes, brokerage commissions and other costs and expenses relating to the securities that are purchased and sold by the Fund, dividend and interest expenses on securities sold short, acquired fund fees and expenses, fees and expenses incurred in connection with tax reclaim recovery services, distribution fees and expenses paid by the Fund under any distribution plan adopted pursuant to Rule 12b-1 under the Investment Company Act of 1940, as amended (the “1940 Act”), other expenditures which are capitalized in accordance with generally accepted accounting principles, and non-routine expenses. Management Fees have been restated to reflect current fees.

² Other Expenses are based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain

the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$33	\$103	\$180	\$406

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in total annual Fund operating expenses or in the Example, affect the Fund’s performance. During its most recent fiscal year, the Fund’s portfolio turnover rate was 318% of the average value of its portfolio.

Principal Investment Strategies

The Fund seeks to track the performance, before fees and expenses, of the Index. The Index, developed by Wilshire Indexes (the “Index Provider”) in partnership with the Adviser, tracks the performance of stocks of large capitalization companies domiciled in the United States. As of September 30, 2025, the companies included in the Index had a market capitalization ranging from \$13.2 billion to \$4.5 trillion. The Index include common stocks and real estate investment trusts (“REITs”). The Index Provider designs, maintains, and calculates the Index using a transparent, ruled-based methodology. This methodology incorporates return forecasts from quantitative machine learning models developed by the Adviser, guiding stock selection and weighting within the Index.

The Index construction process begins with the universe of companies that are current members of the FT Wilshire US Large Cap Index (the “Underlying Benchmark”). The Underlying Benchmark is a float-adjusted, market capitalization-weighted index that tracks the performance of large-capitalization companies domiciled in the United States. With 433 constituents as of June 30, 2025, the Underlying Benchmark covers up to 85% of the U.S. market capitalization.

The construction of the Index is then divided into three steps: (1) risk-adjusted returns estimation via machine learning; (2) covariance matrix estimation and (3) mean-tracking error optimization, as described in greater detail below.

1. Risk-Adjusted Returns Estimation via Machine Learning

The first step of the Index construction process involves forecasting the expected risk-adjusted return of each component of the Underlying Benchmark using machine learning models. These models analyze over 100 stock-level market and fundamental characteristics from well-established academic research, drawn from 12 different categories such as default risk, growth, momentum, productivity, profitability, size and value. The models are based on historical data and aim to identify patterns that help predict which stocks that comprise the Underlying Benchmark are likely to outperform.

2. Covariance Matrix Estimation

The second step of the Index construction process utilizes a covariance matrix to estimate risk and correlations between stocks of the Underlying Benchmark. The covariance matrix uses a statistical factor model to identify how the daily returns of stocks comprising the Underlying Benchmark move in relation to each other, and allows the models to understand how combining different stocks will affect the total risk of the portfolio.

3. Mean-Tracking Error Optimization

In the final step of the Index construction process, a mean-tracking error optimization is performed using the expected returns determined in Step 1 above and the covariance matrix estimated in Step 2. This mathematical process selects stock weights that aim to maximize return while minimizing tracking error from the Underlying Benchmark in terms of risk and exposure. The optimization imposes certain constraints to ensure that the Index remains aligned with the Underlying Benchmark, including industry exposure limits and individual stock weight caps. Stocks with trivial target weights, as defined in the Index methodology, are removed from the Index. The optimization process is repeated periodically to adapt to changing market conditions.

The Index is reconstituted on a quarterly basis. A constituent will be removed from the Index if it is removed from the Underlying Benchmark.

The Adviser employs a passive indexing investment approach. Under normal circumstances, the Fund invests at least 80% of its net assets, plus any borrowings for investment purposes, in component securities of the Index. This investment policy may be changed by the Fund upon 60 days' prior written notice to shareholders. The Fund generally uses a "replication" strategy to achieve its investment objective, meaning that it will invest in all of the securities included in the Index. The Fund

may, however, use a representative sampling approach to achieve its investment objective when the Adviser believes it is in the best interest of the Fund. For example, among other reasons, the Fund may use a representative sampling approach when there are practical difficulties or substantial costs involved in replicating the Index or when an Index constituent becomes temporarily illiquid, unavailable or less liquid. When the Fund uses a representative sampling approach, the Fund may invest in a subset, or “sample,” of the securities included in the Index and whose risk, return and performance characteristics generally match the risk, return and performance characteristics of the Index as a whole. The Fund may also invest in total return swaps that are not components of the Index that the Adviser believes will help the Fund track the Index.

The Fund may concentrate its investments (i.e., invest more than 25% of its total assets) in a particular industry or group of industries to approximately the same extent that the Index concentrates in an industry or group of industries. As of September 30, 2025, the Index was not concentrated in any particular industry. In addition, in replicating the Index, the Fund may from time to time invest a significant portion of its assets in the securities of companies in one or more sectors. As of September 30, 2025, a significant portion of the Index consisted of companies in the Digital Information and Services sector and the Technology sector, as each such sector is defined by the Wilshire Global Assets Taxonomy System (“GATS”), as set forth in the Global Assets Taxonomy System Principles and Methodology (June 2025) published by Wilshire Indexes. The sectors in which the Index components, and thus the Fund’s investments, may be focused will vary as the composition of the Index changes over time.

Principal Risks

As with all funds, there is no guarantee that the Fund will achieve its investment objective. You could lose money by investing in the Fund. **A Fund share is not a bank deposit and it is not insured or guaranteed by the FDIC or any other government agency.** The principal risk factors affecting shareholders’ investments in the Fund are set forth below.

Equity Market Risk – The risk that stock prices will fall over short or extended periods of time, sometimes rapidly and unpredictably. The value of equity securities will fluctuate in response to factors affecting a particular company, as well as broader market and economic conditions. Broad movements in financial markets may adversely affect the price of the Fund’s investments, regardless of how well the companies in

which the Fund invests perform. A variety of factors can lead to volatility in local, regional, or global markets, including regulatory events, inflation, interest rates, government defaults, government shutdowns, war, regional conflicts, acts of terrorism, social unrest, the imposition of tariffs, trade disputes, and substantial economic downturn or recessions. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy, as well as the economies of individual countries, the financial performance of individual companies and sectors, and the markets in general in significant and unforeseen ways. Any such impact could adversely affect the prices and liquidity of the securities and other instruments in which the Fund invests, which in turn could negatively impact the Fund's performance and cause losses on your investment in the Fund. Moreover, in the event of a company's bankruptcy, claims of certain creditors, including bondholders, will have priority over claims of common stock holders such as the Fund.

Machine Learning Risk – The Index tracked by the Fund uses machine-learning and quantitative models to determine its constituent securities and weightings. As a result, the Fund is subject to the following risks:

Machine Learning and Quantitative Index Risk – The machine-learning and quantitative models used by the Index rely on historical financial, fundamental, and market data and statistical assumptions that may not perform as intended in all market conditions. If the models or assumptions used by the Index do not accurately forecast future market behavior, the Index and the Fund may underperform other investment strategies or market benchmarks.

Data Quality and Model Risk – The machine-learning models used in the Index methodology depend on the accuracy, completeness, and relevance of historical data. If the data used by the Index contains errors, omissions, or biases, or becomes outdated or less relevant, the Index's construction and performance may be adversely affected.

Market Regime Change Risk – Machine-learning models are developed using historical data and may be less effective during periods of significant market disruption, unusual volatility, or structural changes in markets. In such environments, the Index methodology may not adapt quickly or effectively, which could result in unexpected or unfavorable Index performance.

Index Methodology and Calculation Risk – The Index relies on the systematic application of quantitative and machine-learning models. Errors in the design, calculation, or ongoing maintenance of the Index, including operational or technological errors, could cause the Index to

be calculated incorrectly or differ from its intended methodology, which could negatively affect the Fund.

Cybersecurity and Technology Risk – The Index methodology relies on complex computer systems and technology. Cybersecurity incidents, system failures, or other technological disruptions affecting the Index provider or other third-party service providers could interfere with the calculation or dissemination of the Index and adversely impact the Fund.

Large Capitalization Risk – The risk that larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes. Larger companies also may not be able to attain the high growth rates of successful smaller companies. Large-capitalization stocks may underperform the broader market, mid-capitalization stocks, or small-capitalization stocks for extended periods.

Geographic Focus Risk – Because the Fund focuses its investments in the U.S., the Fund may be more susceptible to economic, political, regulatory or other events or conditions affecting issuers and countries within the U.S. As a result, the Fund may be subject to greater price volatility and risk of loss than a fund holding more geographically diverse investments.

Liquidity Risk – The risk that certain securities may be difficult or impossible to sell at the time and the price that the Fund would like. The Fund may have to lower the price of the security, sell other securities instead or forego an investment opportunity, any of which could have a negative effect on Fund management or performance.

ETF Risks – The Fund is an exchange-traded fund (“ETF”) and, as a result of this structure, it is exposed to the following risks:

Limited Authorized Participants, Market Makers and Liquidity Providers Risk – Because the Fund is an ETF, only a limited number of institutional investors (known as “Authorized Participants”) are authorized to purchase and redeem shares directly from the Fund. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Fund shares may trade at a material discount to net asset value (“NAV”) and possibly face delisting: (i) Authorized Participants exit the business or otherwise become unable to process creation and/or redemption orders and no other Authorized Participants step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly

reduce their business activities and no other entities step forward to perform their functions.

Cash Transactions Risk – Like other ETFs, the Fund sells and redeems its shares only in large blocks called Creation Units and only to “Authorized Participants.” Unlike many other ETFs, however, the Fund expects to effect its creations and redemptions at least partially for cash, rather than in-kind securities. Thus, an investment in the Fund may be less tax-efficient than an investment in other ETFs as the Fund may recognize a capital gain that it could have avoided by making redemptions in-kind. As a result, the Fund may pay out higher capital gains distributions than ETFs that redeem in-kind. Further, paying redemption proceeds at least partially in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time.

Index-Related Risk – Errors in index data, index computations and/or the construction of the Index in accordance with its methodology may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders. Errors in respect of the quality, accuracy and completeness of the data used to compile the Index may occur from time to time and may not be identified and corrected by the Index Provider for a period of time or at all, particularly where the indices are less commonly used as benchmarks by funds or managers. Such errors may negatively or positively impact the Fund and its shareholders. For example, during a period where the Index contains incorrect constituents, the Fund would have market exposure to such constituents and would be underexposed to the Index’s other constituents. Shareholders should understand that any gains from Index Provider errors will be kept by the Fund and its shareholders and any losses or costs resulting from Index Provider errors will be borne by the Fund and its shareholders.

Tracking Error Risk – While the Fund seeks to replicate the performance of the Index, the Fund’s return may not precisely match the return of the Index. Tracking error may result from, among other things, imperfect correlation between the Fund’s holdings and those of the Index, pricing differences, changes to the Index, regulatory restrictions, legal restrictions, liquidity concerns, transaction costs, operational considerations or timing of cash flows into and out of the Fund.

Trading Risk – Shares of the Fund may trade on NYSE Arca, Inc. (the “Exchange”) above or below their NAV. The NAV of shares of the Fund will fluctuate with changes in the market value of the Fund’s holdings. The market prices of the Fund’s shares will fluctuate continuously throughout trading hours based on market supply and demand and may deviate significantly from the value of the Fund’s holdings, particularly in times of market stress, with the result that investors may pay more or receive less than the underlying value of the Fund shares bought or sold. In addition, although the Fund’s shares are currently listed on the Exchange, there can be no assurance that an active trading market for shares will develop or be maintained. Trading in Fund shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares of the Fund inadvisable. In stressed market conditions, the market for the Fund’s shares may become less liquid in response to deteriorating liquidity in the markets for the Fund’s underlying portfolio holdings.

Passive Strategy Risk – The Fund is not actively managed. Rather, the Fund attempts to track the performance of an unmanaged index of securities. This differs from an actively managed fund, which typically seeks to outperform a benchmark index. As a result, the Fund will hold constituent securities of the Index regardless of the current or projected performance of a specific security or a particular industry or market sector. Maintaining investments in securities regardless of market conditions or the performance of individual securities could cause the Fund’s return to be lower than if the Fund employed an active strategy.

Quantitative Investing Risk – The Index is constructed by the Index Provider using a rules-based methodology based on quantitative machine learning models developed by Rayliant. Securities selected according to a quantitative model can perform differently from the market as a whole based on the factors used in the model, the weight placed on each factor and changes from the factors’ historical trends. Due to the significant role technology plays in a quantitative model, use of a quantitative model carries the risk of potential issues with the design, coding, implementation or maintenance of the computer programs, data and/or other technology used in the quantitative model. These issues could lead to the selection of assets for inclusion in the Index that produce inferior investment returns or provide exposure to greater risk of loss. As a result, the Fund’s performance may be lower or the Fund may be subject to greater risk than if the Index had not been constructed using quantitative

modeling because the Fund invests a substantial portion of its assets in the component securities of the Index.

REITs Risk – REITs are pooled investment vehicles that own, and usually operate, income-producing real estate. REITs are susceptible to the risks associated with direct ownership of real estate, such as the following: declines in property values; increases in property taxes, operating expenses, interest rates or competition; overbuilding; zoning changes; and losses from casualty or condemnation. REITs typically incur fees that are separate from those of the Fund. Accordingly, the Fund's investments in REITs will result in the layering of expenses such that shareholders will indirectly bear a proportionate share of the REITs' operating expenses, in addition to paying Fund expenses. REIT operating expenses are not reflected in the fee table and example in this prospectus.

Sector Focus Risk – Because the Index, and thus the Fund, may, from time to time, be more heavily invested in particular sectors, the value of its shares may be especially sensitive to factors and economic risks that specifically affect those sectors. As a result, the Fund's share price may fluctuate more widely than the value of shares of a fund that invests in a broader range of sectors. The Fund's sector exposures may change over time as the composition of the Index changes over time.

Digital Information and Services Sector Risk – The Fund's investments are exposed to issuers conducting business in the Digital Information and Services sector. The digital information and services sector includes companies involved in cloud computing, digital media, data analytics, online platforms, and related technologies. These companies are subject to rapid technological change, intense competition, and evolving regulatory environments, including data privacy, cybersecurity, and content moderation laws. They may also face heightened risks related to intellectual property, reliance on third-party infrastructure or digital platforms, and changes in consumer preferences. Additionally, security breaches, system failures, or regulatory investigations could materially affect their business operations and valuations. As a result, investments in this sector may exhibit higher volatility and carry a greater risk of loss compared to investments spread across a broader range of sectors.

Technology Sector Risk – The Fund's investments are exposed to issuers conducting business in the Technology sector. Securities of technology companies may be subject to greater price volatility than securities of companies in other sectors. These securities may fall

in and out of favor with investors rapidly, which may cause sudden selling and dramatically lower market prices. Technology securities also may be affected adversely by changes in technology, consumer and business purchasing patterns, government regulation and/or obsolete products or services.

Derivatives Risk – Investments in swaps are subject to market risk, leverage risk, correlation risk, and liquidity risk. Market risk is the risk that the market value of an investment may move up and down, sometimes rapidly and unpredictably. Leverage risk is the risk that since derivatives may be purchased for a fraction of their value, a relatively small price movement in a derivative may result in an immediate and substantial loss or gain for the Fund, and may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. Correlation risk is the risk that changes in the value of the derivative may not correlate perfectly or at all with the underlying asset, rate or index. Liquidity risk is the risk that certain securities may be difficult or impossible to sell at the time and the price that the Fund would like. The Fund's use of swaps is also subject to credit risk and valuation risk. Credit risk is the risk that the counterparty to a derivative contract will default or otherwise become unable to honor a financial obligation. Valuation risk is the risk that a security may be difficult to value. Each of these risks could cause the Fund to lose more than the principal amount invested in a derivative instrument.

Valuation Risk – The risk that a security may be difficult to value. The Fund may value certain securities at a price higher than the price at which they can be sold.

Portfolio Turnover Risk – Due to its investment strategy, the Fund may buy and sell securities frequently. This may result in higher transaction costs and additional capital gains tax liabilities, which may affect the Fund's performance.

Performance Information

The bar chart and the performance table below illustrate the risks and volatility of an investment in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual total returns for 1 year and since inception compare with those of a broad measure of market performance and the Index. Of course, the Fund's past performance (before and after taxes) does not necessarily indicate how the Fund will perform in the future.

Current performance information is available on the Fund's website at <https://funds.rayliant.com> or by calling toll-free to 866-898-1688.

BEST QUARTER WORST QUARTER

12.15%	(12.74)%
3/31/2024	6/30/2022

Average Annual Total Returns for Periods Ended December 31, 2025

This table compares the Fund's average annual total returns for the periods ended December 31, 2025 to those of an appropriate broad-based index and the Index.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Fund shares through tax-

deferred arrangements, such as 401(k) plans or individual retirement accounts (“IRAs”).

Rayliant Wilshire NxtGen US Large Cap Equity ETF	1 Year	Since Inception (12/15/2021)
Fund Returns Before Taxes	20.12%	11.99%
Fund Returns After Taxes on Distributions	15.16%	10.57%
Fund Returns After Taxes on Distributions and Sale of Fund Shares	13.22%	9.09%
S&P 500 Index (reflects no deduction for fees, expenses or taxes (except foreign withholding taxes)) ¹	17.43%	10.82%
MSCI World Index (Net) (USD) (reflects no deduction for fees, expenses or taxes (except foreign withholding taxes)) ¹	21.09%	10.22%
FT Wilshire US Large NxtGen Index (Net) (reflects no deduction for fees, expenses or taxes)	14.95%	12.26%

¹ Effective December 19, 2025, the Fund’s broad-based securities market index changed from the MSCI World Index (Net) (USD) to the S&P 500 Index because the Adviser believes the S&P 500 Index better reflects the Fund’s investment universe.

Investment Adviser

Rayliant Investment Research, doing business as Rayliant Asset Management

Portfolio Managers

Jason Hsu, PhD, Chief Investment Officer, has managed the Fund since its inception in 2021.

Phillip Wool, PhD, Chief Research Officer, has managed the Fund since its inception in 2021.

Purchase and Sale of Fund Shares

The Fund issues shares to (or redeems shares from) certain institutional investors known as “Authorized Participants” (typically market makers or other broker-dealers) only in large blocks of shares known as “Creation Units.” Creation Unit transactions are conducted in exchange for the deposit or delivery of a portfolio of in-kind securities designated by the Fund and/or cash.

Individual shares of the Fund may only be purchased and sold on the Exchange, other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. Because Fund shares trade at market prices rather than at NAV, Fund shares may trade at a price greater than NAV (premium) or less than NAV (discount). When buying or selling shares in the secondary market, you may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) (the “bid-ask spread”). When available, recent information regarding the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads will be available at <https://funds.rayliant.com>.

Tax Information

The Fund intends to make distributions that may be taxed as qualified dividend income, ordinary income or capital gains, unless you are investing through a tax-deferred arrangement, such as a 401(k) plan or IRA, in which case your distribution will be taxed when withdrawn from the tax-deferred account.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s web site for more information.
